

STREAM PUMP MINI

Stream Pump Mini

Approx. 30×23×30 (mm)

Maximum Discharging Rate: 1.75L/min

Cord length: approx. 85cm

Adjust water flow with the slider on the pump's underside.

The Stream Pump Mini, a submersible pump for circulating water in small aquariums, is now on sale. Install in aquariums too small for external filters or aquariums which only need circulated water in aquariums, this pump makes it possible to create a water flow suitable for living organism.

The main unit, whose compact size keeps its presence in an aquarium minimal, has suction cups on the rear to allow for installation even on mildly curved surfaces, and has a flow rate adjustment slider which allows the water discharge amount to be controlled. A 9mm hose (inner diameter) can connect to the detachable discharge nozzle, so it is useful for various scenarios.
