

Launch of Mini NA Individual Products including NEW 'Mini NA Liquid'

In response to the requests of customers who already own the CO₂ regulator and Magnet Light G, we are offering Mini NA individual product sales. This allows customers to separately purchase necessary items and enjoy growing aquatic plants with the Mini NA. Please note that when purchasing the products individually, you will need to purchase the Ball Valves and tubes that come with the Mini NA Set 150 separately.

Mini NA Liquid

Mini NA Liquid is a liquid fertilizer for small aquariums that contains a balanced amount of nutrients essential for the healthy growth of aquatic plants. In aquariums equipped with appropriate lighting and CO₂ addition equipment, adding the specified amount will help aquatic plants grow beautifully. One push will deposit the correct amount for 1 liter of aquarium water (0.5 mL), making it easy to use. For plant layouts in Mini NA or small aquariums, you can adjust the dosage by observing the growth rate of the plants and the occurrence of algae. This additive is especially recommended for growing aquatic plants in a Mini NA.

*Cube Garden W150xD150xH220mm comes with Aqua Soil Amazonia Ver.2 (1L) and Bacter R.
