

ADA NATURE AQUARIUM GOODS

Aqua Soil - Amazonia Ver.2 Powder Type 3L New Release

ADA is releasing the Aqua Soil - Amazonia Ver.2 Powder Type 3L. This product uses the same materials as the original Aqua Soil - Amazonia Ver.2, but the soil particles have been made finer. It is ideal for use in small aquariums or can be spread thinly over the normal type to create a more aesthetically pleasing front substrate line. The dense soil also makes it easier to plant foreground plants such as *Glossostigma elatinoides*, and it reduces the chances of plants floating up after planting. Furthermore, as it is made from natural soil, it helps create water conditions more suited for aquatic plants and tropical fish, making early-stage maintenance simpler. We recommend this product to everyone, from beginners to seasoned hobbyists.

***Supplements are not included with Aqua Soil - Amazonia Ver.2 Powder Type.**
