

# NEW INDOOR GREEN GLASS POT “CELL” RELEASE INFORMATION

[Scheduled for released in April 2024]

We are planning the release of "CELL", the glass pot for enjoyment of plants from ADA.

"Cell" is not just for plants that can be kept under constant humidity but also for the cultivation of plants that are native to tropical rainforest or wetlands. With humidity control and the maintenance of a high moisture content in the soil we have made it possible to enjoy viewing plants which are adapted to a diversity of environments.

From one of three designs, choose a water container of colored glass to suit your viewing space. In line with recent demand for indoor green interiors, we have come up with designs to match a diversity of home situations. We will inform you of details such as the release date and prices once they have been decided.
