

# Magnet Parts for CIRCULATION FAN 40

The recently launched "Mini NA Set 150" requires careful temperature management due to its small water volume, which makes it sensitive to ambient temperature changes. To lower the water temperature to an appropriate level during warmer periods, attach this dedicated magnet part to the Circulation Fan 40 (sold separately) and attach it to the Metal Cover Mini. This will allow the fan to blend in seamlessly and lower the water temperature by 2-4°C (the degree of temperature decrease depends on the surrounding temperature and humidity). Please use the Circulation Fan 40 and this dedicated magnet part with your Mini NA Set 150 to maintain optimal water conditions.
