

DOOA, an inspiring brand, helps you enjoy aquatic plants more freely. Minimal and easy, and designed as a platform allowing everyone to nurture plants indoors. Feel closer to nature, and bring beauty into your life.

Connecting to System Paluda 30/60・Neo Glass Paluda 30/60 DOOA Circulation Fan 40 Released

Ventilation is necessary for the healthy growth of terrestrial plants such as tropical rainforest plants, and it is an important growth condition especially for epiphytic orchids that grow on trees. DOOA Circulation Fan 40 is a fan developed for growing those tropical rainforest plants with System Paluda 30/60. Unlike the existing small fans, it is designed to mount to an Ø40mm hole, and it can be used for both suction and exhaust depending on the fan orientation. Additionally, by using Mistflow with it, a foggy environment similar to a cloud forest can be recreated. It is drip proof to use the product in a humid environment, and the airflow can be adjusted in 3 stages.

- Connect the product to System Paluda 30/60・Neo Glass Paluda 30/60 and use.
- Circulation Fan 40 cannot be used alone.
- USB adapter (5V1A) does not come with the product. Connect the product to a USB port of Power Cord S-70 or purchase a USB adapter separately as needed.

Circulation Fan 40
